Save Environment

The conditions or surroundings in which we all live is called the environment. The main elements of the environment, are air, water, temperature, weather conditions and more. The environment is the base of the life cycle. It is the most precious gift of nature. But now environment is in danger. Saving the environment is very important for living a comfortable life. It is the biggest challenge for humans to revert the environment to its real state.

- Afforestation is another essential way to save our trees and forests.

- Without Geography
You're Nowhere.

- Geography is an
Earthly Subject,
But a heavenly
science.

- Geography is not
important,
It is essential...

The issues facing
us today can only
be understood
from a geographical
perspective.

- In our changing
world Nothing
changes more
than Geography.

most precious gift of nature. Our environment is in danger. Saving the environment is very important for living a comfortable life. It is the biggest challenge for humans to restore the environment to its real state.

- Afforestation is another essential way to save our trees and forests.

Introduction of Hydrology

Hydrology is the study of water, its distribution, and its movement on and under the surface of the earth. It is a branch of geology that deals with the water cycle, including precipitation, infiltration, runoff, and evaporation. Hydrology is a multidisciplinary field that involves the study of water resources, water quality, and water management.

POLLUTION

The most serious source of pollution is air pollution. Air pollution is caused by factories, cars, and power plants. It is a major health hazard and can cause respiratory problems, heart disease, and cancer. Air pollution is also a major cause of global warming. It is important to reduce air pollution by using public transportation, carpooling, and conserving energy.

POLLUTION

The term 'pollution' means manifestation of any unsolicited foreign substance in something. When we talk about pollution on earth, we refer to the contamination that is happening of the natural resources by various pollutants. All this is mainly caused by human activities, which harm the environment in ways more than one. Similarly, the pollutants which are missing up the air and increasing the level of carbon dioxide is very dangerous for humans.

Destruction of Nature

I see the nature's beauty
from faraway, it looks pretty
but many times, my heart pains to see it
because it's being destroyed bit by bit

The sun once shone so brightly
now it seems to change greatly

The birds used to sing songs of happiness
now they sing of mourning and sadness

Oh, why do people
abuse dear nature?
why is it that destruction

is now their culture?

Lord of Heaven and earth help me
their evil ways, let them see.

Environmental Pollution

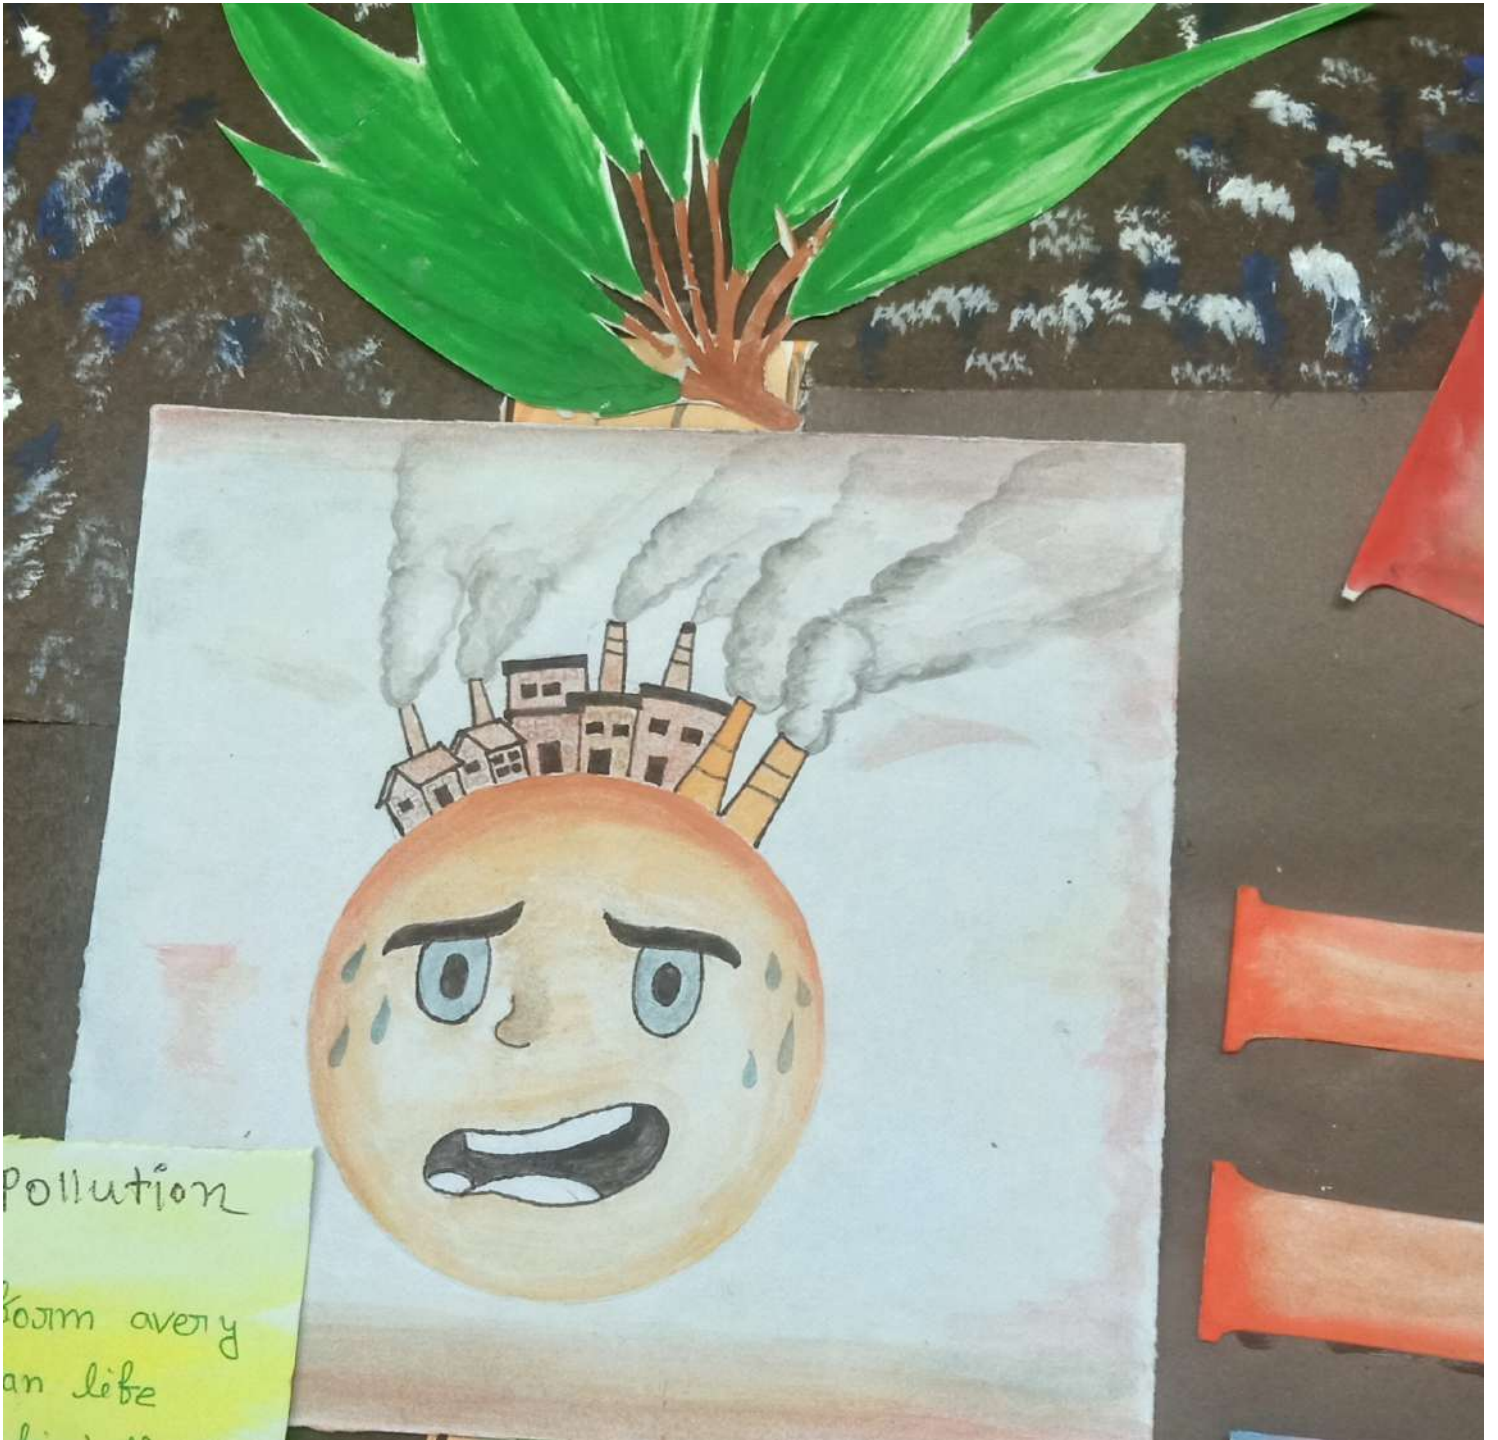

The environment forms a very important aspect of human life because that is where we find the essentials of life e.g; air, water and food. Due to global industrialization and modernization there has been environmental pollution. The environmental pollution has greatly affected the quality of life for animals; plants and humans.

Environmental pollution is basically, the contamination of environment's nature in both physical and biological systems which affects the normal functioning of the environment.

The types of environmental pollution are specific to causes and components of the environment.

NATURAL DISASTERS

1. EARTHQUAKES: The sudden shaking of interlocking plates of the earth is called an earthquake.

a. SEISMIC FOCUS: The point below the earth's surface where the vibrations of an earthquake are called the seismic focus.

b. EPICENTRE: The point on the earth's surface directly above the focus is called the epicentre.

2. Volcanic Eruption: The spewing out of lava, ash, gases and rock fragments through a vent, or opening, at a weak spot in the earth's crust is called a volcanic eruption.

3. LANDSLIDES: A landslide occurs when masses of rock loosened by weathering move down a slope under the pull of gravity.
